INTRODUCTION

This is a collection of optional or suggested rules for **ADVANCED SWORDS & SORCERY** (or comparable old school, rules-lite systems) that are designed to be added to games as the Referee chooses.

These were omitted from the vanilla ruleset often for either being too mechanics-heavy for the rules-lite design philosophy, or for being applicable only to edge cases of regular play. In the vanilla ruleset, Referees finding themselves in either of these circumstances are encouraged to make common sense consistent rulings. In that regard, these rules can also be thought of as helpful guiding examples of what such rulings might look like.

Broadly speaking, the rules listed in this collection are all high-level; that is to say, rather than dealing with minute details like spell mechanics or class abilities, most of these rules are big-picture systems that can be slotted into any game at a Referee's will with little prior introduction. (Although there is a section on class abilities too.) Players either need a brief introduction, or they may be completely unaware that the rule is being used.

Not all rules throughout are compatible with one another. In fact, quite the opposite! It is not expected that every modular rule is to be used. Referees should be compelled to pick and choose what suits their table best.

ABSTRACT DICE MECHANICS

Big Purple d30

Once per session, each player may opt to roll a single d30 in lieu of whatever die or dice the situation normally calls for. The choice to roll the d30 must be made before any roll. The d30 cannot be rolled for generating character statistics or hit points.

If this is too extreme, replace d30 with the next highest die size of the intended roll. For example, a d10 is upgraded to a d12. A d20 upgrades to the d30.

Escalation Die

The escalation die is a way to ramp up the stakes as combat progresses. Place a d6 on the table, side 1 up. Starting on the second round, all combatants get +1 for each pip on the die. At round 3, flip the die to 2. At round 4, flip it to 3, and so on. Larger or smaller escalation dice may be used at Referee discretion.

Depending on context, the escalation die can be used for other escalating scenarios. For example, perhaps it is tied to an ancient altar that fills all nearby with visions of rage-inducing violence. In this method, the Referee might give both PCs and villains +1 to attack and damage for each pip on the die after the first round. Or, perhaps waves of

necrotic energy flow off of an evil statue; at the beginning of each round, all entities in the room take d6 damage for each pip on the die after the first round. Or, when the die hits six, the airship on which the PCs fight might crash to the ground if they don't fight back the fire elemental lord that normally fuels the ship. Or, the Referee can use the escalation die to trigger specific abilities of a boss monster; e.g., as the PCs battle the red dragon, the dragon's skin becomes hotter and hotter, releasing waves of heat as the battle escalates. Each point on the die adds d6 onto the dragon's attacks and melee attacks on the dragon result in d6 damage to the attacker. Or, the escalation die could act as a minion generator; each round after the first spawns a new minion for each pip on the die.

Time Pool

The Time Pool is a collection of dice in the center of table which tracks the passage of time and random encounters during adventuring.

Whenever there's a moment in the game where several minutes will pass in the dungeon before the players finish one or more tasks, the Referee declares that "time passes" and adds a single die to the Time Pool or rolls the Time Pool. The die that gets added is based on the danger of the place. Extremely hostile locations use d4s, normal dungeons use d6s, and sparse dungeons use d8s. Each die in the Time Pool potentially represents up to ten minutes of spent time, vaguely speaking. Once there are six dice in the Time Pool, the Time Pool is full and no more dice can be added. Instead, whenever time passes, the Referee must roll the Time Pool.

Whenever time passes, the Referee has the option of rolling the Time Pool instead of adding a die. The Referee should do this whenever the action the party has undertaken would attract undue attention. To roll the Time Pool, the Referee picks up the dice and rolls them all. If any die shows a 1, something bad happens. If nothing bad happens, the Time Pool is simply returned to the middle of the table to potentially cause something bad to happen again in the very near future. Once something bad happens, if the Time Pool isn't full, the Referee removes one die from the Time Pool. But if the Time Pool was full, after something bad happens, the Referee clears the Time Pool. At that point, the Referee tracks that an hour has passed. Durations expire, light sources go out, etc.

The bad thing can be random encounters or context time-sensitive countdowns, like a patrol approaching, a ruin collapsing and a part of the dungeon closing off, more of the dungeon becoming flooded, the cult completing one of the six steps in opening the portal, etc.

CHARACTER GENERATION

Failed Professions

Adventurers become adventurers because they are cast out of civilized society, not due to some noble drive for excite-

ment. Adventuring is messy, gruesome, and deadly, and most characters don't willingly turn to it unless they are slightly wrong in the head.

Characters have a failed profession, representing what they did before adventuring. A failed profession can mechanically provide a new character with relevant items, like a lookout owning a spyglass or a jailer with manacles. When a character's profession would be advantageous to them during gameplay, they may roll with Advantage.

The Funnel

Instead of generating a level 1 character, generate several level 0 characters. Roll 3d6 in order for stats, d4 HP, 8 AV, give them two items, no class, but a failed profession if using them. All characters then go on an adventure that tests their mettle, the "funnel." Those that survive are upgraded to level 1 adventurers. Pick their class and any other mechanics according to their actions during the funnel.

CHASES

Chases Using 2d6

Each round, each group of pursuers and fugitives rolls 2d6. If a group is particularly slow (e.g., over encumbered, injured, etc.), they roll 3d6. A group moves at the speed of its weakest link.

In between rounds, provide choices for the players. Do not give complete descriptions and details; only quick demands, like "Left or right?!" if they are fleeing. There is no time to take in environments and make careful choices during a chase. If they have made a map, they should not consult it.

If all the dice of a group match (i.e., rolling doubles on 2d6 or triples on 3d6), the group succeeds: fugitives escape or pursuers corner a group of fugitives. Ties go to fugitives. Make note of where chases end: characters may become lost and disoriented, lose dropped items, etc.

If any results of the fugitives' dice match the pursers', they can exchange a round of ranged attacks with one another; e.g., if the fugitives roll 4 and 6 and the pursuers roll 4 and 5. Missile fire is the only permissible action; no reloading or other actions.

If either side rolls 7, that side can take a round of actions. They may attack, reload, cast a spell, grab an item, open/close doors, etc.

At any time, a group of fugitives/pursuers may split off into smaller groups, but they cannot reconvene until after the chase. The chase continues until the fugitives get away, are cornered, or either side is dead.

If the players act in a way benefiting their rout/pursuit, like dropping something the pursuers desire, they may gain the ability to nudge one of their die rolls by +1 or -1 .

Chases Using Snakes and Ladders

Create a Snakes and Ladders board. Fugitive groups go first. On a group's turn, roll d6 + the speed die of the slowest group member. Move forwards or backwards the resulting number of squares.

The speed die is determined by factoring encumbrance, injury, etc. Start at d8 and downgrade the die for each slowing condition: d8>d6>d4>-. Upgrade for hastening conditions.

In between rounds, provide choices for the players. Do not give complete descriptions and details; only quick demands, like "Left or right?!" if they are fleeing. There is no time to take in environments and make careful choices during a chase. If they have made a map, they should not consult it.

Pursuers catch fugitives if they reach the end first (optionally: or land on the same square as the fugitives). Fugitives escape if they reach the end of the board without being caught. Make note of where chases end: characters may become lost and disoriented, lose dropped items, etc.

The board can have squares with special effects: increasing or decreasing speed dice, hazards or distractions, rerolls, etc.

CORRUPTION

Manifestations of Corruption

Gaining a Corruption point or succeeding on a Corruption check can manifest physically or psychologically on the character (recall that failing a Corruption check results in the loss of the character). Below are some possibilities. Roll d6 and modify as desired:

Roll	Minor Corruptions Result
1 or less	Develop horrid pustules, painful lesions, and open sores that do not heal.
2	Skin changes to an unnatural color.
3	One leg grows 6 inches.
4	Eyes affected. Roll d4. 1: glow unnaturally. 2: sensitive to light. 3: infravision. 4: large and unblinking.
5	Constantly shake and twitch.
6 or higher	Pass out for d6 hours.

Moderate Corruptions	
Roll	Result
1 or less	Febrile: lose 1 STR each month for d4 months.
2	A duplicate face grows on the PC's back.
3	Crackle with magical energy, prone to inopportune bursts.
4	Demonic taint. Roll d4. 1: fingers become claws. 2: feet become hooves. 3: legs become goats'. 4: grow horns.
5	Skin appears to melt like wax; it flows and reforms into odd puddles and shapes.
6 or higher	Tongue forks and nostrils narrow to slits.

Major Corruptions	
Roll	Result
1 or less	Soul claimed by a devil and a permanent -2 to all stats.
2	Flesh falls off in chunks; lose d4 HP daily. Only magic healing staves off decay.
3	Each month, one limb is replaced with a tentacle.
4	Tentacles grow at mouth and ears.
5	Third eye. Roll d4. 1: forehead. 2: palm. 3: chest. 4: neck.
6 or higher	Skin transforms. Roll d4. 1: scales. 2: feathers. 3: fur. 4: eyes.

Other Classes can be Corrupted Too

In the vanilla game, only the Warlock class gains Corruption points and makes Corruption checks. This can be extended to any class; all characters can earn Corruption for doing despicable acts, like murdering the innocent in cold blood, taking part in vile rituals, or unlocking evil artifacts.

DEATH AND NEAR DEATH

Death and Dismemberment Table

This replaces the vanilla mechanic that characters at or below 0 HP are incapacitated until combat is over and then must **Thread the Needle** between CON and their HP below 0 to revive.

Player characters can't have less than 0 HP. Each time a PC takes damage that would take them to or below 0 HP, their HP is set to 0 and they must roll 2d6 on the table below. Optionally, subtract 1 from their roll for each additional time the PC rolls on the table in a given session. Weak hirelings and mundane monsters are dead at 0 and do not roll. Named, epic monsters like dragons should roll, perhaps on a custom table. Classed hirelings might roll, or might die at 0, as do major foes, like an orc chieftan or dreaded owlbear.

Roll	Result
2 or less	Instant death: decapitation, etc.
3	Fatal wound: gutted, stabbed through lung. Die in d6 turns.
4-5	Severed limb: Referee's choice or random roll. If head is severed and no helmet, go to 2. If body is severed and no armor, go to 3. Else, die in 2d6 turns. A tourniquet, cauterization, or magic healing (will not restore HP) will allow a CON save to live.
6-7	Broken bone: Referee's choice or random roll. If head is broken and no helmet, in coma until healed. Else, 3d4 weeks to heal.
8-9	Knocked out for 2d6 turns unless wearing a helmet, in which case stunned for 1 round and helmet is shattered.
10	Stunned for 1 round unless wearing a helmet, in which case knocked down and helmet is shattered.
11	Knocked down.
12	A surge of adrenaline returns d4 HP for each PC level. After combat, HP returns to 0 and the PC faints for 2d6 minutes.

A PC can continue to act until outright dead using this rule-set, even at 0 HP or if they will die in so many turns.

Death Saving Throw

This replaces the vanilla mechanic that characters at or below 0 HP are incapacitated until combat is over and then must **Thread the Needle** between CON and their HP below 0 to revive.

When a character is reduced to 0 or below HP, the player should make a Death Saving Throw (DST), described below. If they fail, they are dead. If successful, the character will return after combat is concluded with 1 HP, gravely injured. In this state, a character cannot act in combat or engage in adventurer tasks unless healed. Additionally, should a character that is gravely injured take any damage, it is a killing blow, without further recourse to the DST.

Death Saving Throws increase (making survival less likely) each time the character makes one. All characters begin with a DST that succeeds upon rolling a d20 higher than 10, but this increases by one point each time they roll against it.

Funerals

If a dead body is safely recovered by the party, they may hold a funeral for the deceased. For every 1 gold invested in the funeral via memorials, parades, bar tabs, lavish ceremonies, and otherwise giving them a proper send-off, the party purchases 1 of the deceased's experience points. Each party member may also donate one magic item to the grave. Scrolls, potions, and other one-shot items net a bonus of 250 experience, while more permanent items earn 1,000 experience. Magic items that would have been unusable by the deceased do not count.

Gamble Your HP

HP now determines how characters attack. Each HP spent lets the player roll an attack. For example, rolling to hit, spend 3 HP to get to roll 3d20 and pick the best one; spend 8, roll 8, pick the best, and so on. All violent action costs HP.

At 0 HP, the character is at the whims of the enemy. They can automatically kill the character or something else, like kidnap them or chop their limbs off.

Damage works like normal, but gamble HP to roll for damage as well. (Optionally: for damage, rather than taking the highest roll, every point of HP invested is a damage die. If this is overpowered, a cap can be placed: limit the number of HP allowed to be spent when dealing damage to the number of HP spent when rolling the attack.)

HP pools can be increased a bit to compensate for this system, though should not be dramatically so.

Grit and Flesh

Grit and Flesh are fictional abstractions of HP and health. Grit is HP, renamed, and is mechanically identical to HP. It is an abstract measure of a character’s well-being and fitness for combat. Losing Grit represents close calls, bruises, scratches, dented armor, and so on. When Grit is depleted, damage is applied to Flesh.

PCs have 1 HD of Flesh, never gaining more. (Optionally, a generous Referee can give PCs their max possible Flesh.) Losing Flesh represents breaking bones, punctured flesh, blood loss, and so on. At 0 Flesh, use any death system listed, or just have the character die outright. Only rest heals Flesh: 1 per week.

Level 1 PCs only have Flesh. As PCs level up, they gain Grit but never increase max Flesh.

Optionally, the Elf’s surge attack, the Halfling’s sneak attack/advantageous position attack, and the Ranger’s attacks against their quarry bypass Grit and damage Flesh directly. Also optionally, if using rules for surprising foes, surprise attacks bypass Grit and damage Flesh directly. These rules substantially power up players, so should be implemented with consideration.

Scars

Scars are weakly compatible with any of the death mechanics; there may be some house-ruling required.

When you are taken to exactly 0 HP, you get a scar. Your first scar adds d6 HP to your max HP. To determine your scar, roll d6 plus the damage caused by the attack and compare to the following table.

Roll	Result
2	Busted foot: reduced to a limp until fixed.
3	Lasting pain: a nasty scar that causes intense pain if pressed.
4	Busted lung: breathing is loud and you cough blood often.
5	Smashed jaw: several lost teeth and a gained speech impediment.
6	Bloody mess: you gain no benefits from resting until stitched up competently.
7	Shaken nerves: you stammer, twitch, and shake, unless you use something to calm your nerves.
8	Disfigurement: face is totally disfigured.
9	Mind splinter: A specific element of this injury is stuck in your psyche. Lose d3 INT each time you’re forced to confront it.
10	Gouged eye: an eye is gouged out.
11	Obsession: you gain no benefits from resting until achieving revenge.
12	Hewn limb: one limb is torn off or in need of amputation.
13	Terrible fracture: one limb is broken. It needs setting by competent hands, until then, you gain no benefits from resting.
14	Lost sense: one of your senses is lost.
15	Heart damage: heart is critically injured. If you suffer this again, you die.
16	Shadow of death: any time you sleep, save vs WIS or scream through the night.
17	Fractured skull: you drool and slur. If you suffer this again, you die.
18+	Doomed to die: you should not have survived that. You have nightmares of your own death. If you fail your next risky save, you die horribly. If you pass, remove this effect.

Smash Bros HP

Play combat as normal, but add damage from 0 instead of subtracting from max HP. When a player’s damage passes an established threshold, roll d100 (optionally: smaller dice for more lethality). If the roll is under the damage total, the character says their last words and dies.

Alternatively, instead of a threshold, roll for death every time they take damage.

DISEASES

Disease Mechanics

Adventuring is not a clean business. Filthy sewers, rabid animals, rusty swords - there are countless ways in which a person might contract a debilitating disease. There are three basic steps to follow when contracting disease: contact, incubation, and infection.

First, a character needs to come in contact with a disease. Diseases are transmitted in many ways; some more mundane diseases are spread through direct or indirect contact,

bites, or consumption, but more bizarre diseases may have other vectors, like hearing an infected person say a trigger word.

Next, the disease has an incubation period. In this time, no symptoms are displayed.

Finally, after the incubation period, the player must **Thread the Needle** below their CON and above a number chosen to reflect the communicability of the disease. Success indicates the character is not infected, but failure means the disease is present and stage one symptoms occur.

If a disease is present, it has several stages (the number of stages depends on the specific disease) in which symptoms worsen. Stage effects are cumulative; a character on stage three suffers symptoms from stages one, two, and three. Each time the incubation period passes, the player must **Thread the Needle** below their CON and above the communicability number. Success indicates that the disease has reached its zenith; it goes into decline (see below). Failure means the disease worsens by one stage. First-aid, medicine, and bed rest give Advantage to the roll.

If a disease is in decline, then the player automatically succeeds on each subsequent roll to determine if the disease worsens a stage or not. If the roll is automatically successful and the disease is at stage 1, then the disease has passed and no symptoms remain. If the disease is in decline but the character comes into contact with the disease again before it has passed, they go into relapse, and no longer automatically pass their rolls.

Diseases may also be treated. The treatment depends on the specific disease. A treated disease is automatically in decline and cannot relapse.

Generating Diseases

A disease which uses the above mechanics can be generated via the following tables. Roll d6 or choose, or determine your own beyond what is listed below.

Roll	Communicability Number (Choose from listed)
1	1-2, not very infectious, very easy to overcome
2	3-4, moderately infectious, easy to overcome
3	5-6, quite infectious, slightly hard to overcome
4	7-9, very infectious, hard to overcome
5	10-13, incredibly infectious, very hard to overcome
6	14+, extremely infectious, almost impossible to overcome

Roll	Incubation Period
1	1 round
2	1 hour
3	1 day
4	3 days
5	1 week
6	1 month

Roll	Transmission
1	Direct contact: touching an infected person or fluid, like blood, sweat, or pus
2	Indirect contact: through air or diseased items
3	Bites: natural or supernatural creatures bite and inject disease
4	Consumption: eating or drinking rotten or diseased goods
5	Sensory: seeing, hearing, or smelling a trigger which transfers the disease
6	Extrasensory: curses, psionic transmission, gravitational, temporal, transferred via idea

Roll	Number of Stages (Choose from listed)
1	2
2	3
3	4
4	5-6
5	7-8
6	9+

Roll	Stage Effects
1	Advantage or Disadvantage on certain rolls
2	Reduced physical or mental capabilities
3	Vulnerability to certain damage
4	Inventory slots lost
5	Bleeding, blisters, boils, coughs, cramps, fever, lesions, sneezing, sweating, vomiting
6	Addiction, anxiety, delirium, hostility, insomnia, mania, paranoia, stress, tiredness

Roll	Treatments
1	Ingest a rare quest ingredient
2	Destroy the originator of the disease
3	Excise the infected region
4	Infect another character
5	Force the disease to reach the final stage
6	No known treatment exists - research!

EQUIPMENT AND ENCUMBRANCE

Adventurer's Gear 1

Adventurer's gear is a pack of useful, mundane equipment. It can contain many different items, such as a bucket, candles, chains, flint and steel, a grappling hook, locks, a mirror, needles, pitons, poles, rope, soap, torches, vials, a whistle, or more. When a player "uses" their adventuring gear, they unpack it and discover that it contains the item they need at that moment. Adventurer's gear uses a usage die that starts at d6. It costs 10 gold.

Adventurer's Gear 2

In this case, adventurer's gear still represents an abstract pack of miscellaneous items that can be determined as the player unpacks needed items. Here, however, instead of a usage die and a 10 gold price tag, a player can purchase adventurer's gear of any price. When they want to remove

an item from the adventurer’s gear, they simply reduce the value of their adventurer’s gear by the cost of the item.

Anti-Hammerspace Item Tracker

Traditional encumbrance systems work to weigh you down, but not to define where your items actually are. It’s almost impossible for a Referee to mess with items; you have to ask where the player’s keeping them, they have to make something up, and you have to shrug and say “Well, they’re gone now.” It feels like cheating.

Instead, each character carries 6 containers, and each container has 3 slots. The player defines what each container is - a sack, utility belt, backpack, etc. Wearing light armor takes 1 container, medium takes 2, and heavy takes 3. Small shields take one slot, large shields take 2, and most other items take a single slot. The player just writes down or draws each item in a slot as they get it. Tiny miscellaneous items need not take up a slot, within reason.

Conditions Take Inventory Slots

Every condition consumes one inventory slot each until they are healed or overcome. Sample conditions include: Cold, gained by exposure to the cold; Diseased, gained by suffering an illness; Exhausted, caused by getting less than 8 hours sleep; Fatigued, gained from traveling more than 12 hours; Hungry, caused by neglecting daily rations; Overheated, gained by exposure to the heat; Soaked, caused by being wet.

Item Degradation

Every item has a durability, which measures the amount of damage (recorded in notches) that the item can take before being destroyed. When items take direct damage, they obtain notches. In addition to tracking damage, notches provide mechanical downsides; using a tool, roll at Disadvantage, using a weapon, downgrade the damage die, or if the item provides a statistical boon, like armor, decrease it in increments.

When an item receives a set number of notches, it will shatter. The number of notches is dependent on the fragility of the item; consider the following table, which describes the total notches needed to shatter the item.

Fragility	Examples	Total Notches
Delicate	Thin glass, ceramics, complicated or tiny machinery	2
Sturdy	Wood, metal, well-made goods	10
Indestructible	Thick stone, strong metal	50

Items can be repaired by a craftsman, costing 10% of the item price per notch. Depending on the item, this may require rare or expensive components. Characters may also use relevant tools to perform basic repairs on their gear,

requiring an hour, said tools, and a successful INT check to repair one notch. Failure results in a new notch.

Items may be tempered so that they withstand more damage. Different tempering qualities multiply the maximum number of notches of the item by the modifiers on the following table.

Tempering Quality	Modifier
Standard (no tempering)	× 1
Uncommon	× 2
Rare	× 4
Mythic	× 8

Applying a temper requires a trained craftsman. Rare and unique equipment may require special materials for tempering; retrieving these components may be an adventure in itself. The table below lists the cost of tempering an item in gold and in time, and lists the new value of the item after tempering (for reference when reselling, removing notches, or other needs).

Quality	Cost	Time	Tempered Value
Uncommon	Base value×2 gold	3 days	Base value×3 gold
Rare	Base value×4 gold	1 week	Base value×6 gold
Mythic	Base value×8 gold	2 weeks	Base value×12 gold

Items also have an appearance quality. This doesn’t affect the effectiveness, but it may change how people react - a merchant will offer much less for lower quality goods, and a noble may be offended to receive anything that appears second-hand. On the other hand, sometimes a character may want their items to have a few scratches - a fighter who wears pristine armor may look like they’ve never been in battle, drawing scorn and derision. There are four grades of appearance quality:

Appearance	Mechanics	Description
Pristine	The item has never been notched.	Seems brand new.
Worn	The item has had at most one notch at a time.	Moderate signs of use.
Well-worn	The item has had at most three notches at a time.	Heavy signs of use.
Scarred	The item has had more than three notches at one time.	Shabby, in poor condition.

Attempting to sell an item of lower appearance quality incurs a penalty. The table below describes the percentage penalty applied to the price the merchant is willing to purchase the item in pristine quality. For instance, if a merchant will buy a pristine longsword for at most 50 gold, then they will buy a well-worn longsword for at most 25 gold.

Appearance	Resale Value
Pristine	100%
Worn	75%
Well-worn	50%
Scarred	25%

An item's appearance quality can be restored by an appropriate craftsman. Doing so costs 50% of the item's worth and requires one week of work to improve the appearance quality by one level.

Item Traits that Encumber More

Every item can have multiple keywords from the following list. For each one the item weighs one slot more:

Keyword	Description
Fragile	Items that are prone to breaking or damage.
Long	Objects longer than 5 feet in any dimension.
Cumbersome	Things that are shaped in ungainly or awkward ways.
Heavy	Objects that despite their size require greater effort to move.
Difficult	Objects that are hard to store or handle, like hot or dangerous things.

If using these rules, consider adding items that ignore them, making the item more desirable. For example, heavy plate armor might be considered Cumbersome and Heavy, so an expertly crafted set is not Cumbersome, and a master set is neither.

More Forgiving Encumbrance

In the vanilla game, a character can only carry a number of items up to their STR. With this rule, characters can carry $STR \times 1.5$ items (optionally: $STR + CON$ items), but must roll all rolls at Disadvantage when carrying more than their STR, and are "encumbered" for the purposes of movement.

Readied Equipment

When a PC must remove an item from their equipment in a time sensitive manner, e.g., during combat, they should roll a d20 (optionally: d30). If the roll is equal to or higher than the numbered slot in which the item resides, the PC successfully removes the item. If not, they must try again during their next turn (optionally: with a bonus to succeed, or an automatic success).

Simpler Usage Die

After using a consumable, roll d6.

Roll	Result
1	Depleted.
2-3	Only one left.
4-6	No change.

GOLD

Mechanics for Investing

When investing, the player chooses: 1: what they're investing in, 2: how much money to invest. The Referee determines the risk level: whether the investment is Stable, Risky, or Wild.

Every month the following happens:

- (Stakeholder update) whoever manages the investment sends a letter updating the player on the business, its fortunes, its prospects, and any pertinent local news,
- (Risk table) roll on the table below to see how successful the business was this month, and
- (Profit/loss) roll the specified die to see how much value the investment lost or gained.

Risk Level			Result
Stable (3d6)	Risky (2d6)	Wild (d6)	
-	-	1	Bankrupt! Lose every last gold.
-	2	2	Terrible catastrophe. -d20% value.
3-4	3	3	Major calamity. -d10% value.
5-6	4	-	Mild setback. -d6% value.
7-8	5	-	Bad omens. -d4% value. -2 to next risk roll.
9-12	6-8	-	Business as usual. +1% value.
13-14	9	-	Encouraging signs. +d4% value. +2 to next risk roll.
15-16	10	-	Good fortune. +d6% value.
17-18	11	4	Excellent luck. +d10% value.
-	12	5	Massive windfall. +d20% value.
-	-	6	Huge profits! +d100% value.

Circumstantial bonuses can be applied to the risk roll; setting up the business personally or clearing the nearby area of threats might give a bonus, for instance, while a change

in management or a hazardous work environment might impose a penalty.

An additional hireling, the accountant, adds d10% to an investment each month and requires 5% of the business's total value in payment each month.

After each risk roll, the player can decide to cash out some or all of their investment.

Investing money does not count towards the gold spent to level up.

Mechanics for Selling

When characters are adventuring and find something valuable, set a Dice Price for the item. The player should write the Dice Price next to the item.

Dice Price	Examples
d10	Common objects: bucket, candles, flask, pole, rations
d10×3	Simple tools, small weapons: club, crowbar, dagger, ladder, rope
d10×5	Complex tools, medium weapons: chain, lantern, lock, longsword, tent
d10×10	Fancy tools, large weapons, light armor: clock, greatsword, leather vest, lockpicks
d10×20	Exotic weapons, medium armor, art: books, chainmail, chain-scythe, painting
d10×50	Heavy armor, luxuries, jewelry: diamond, full plate, perfume, ruby ring
d10×100	Large gems, forgotten treasures: huge emerald, kings' clothes, mithril shield

When the characters are ready to sell something, the following steps occur:

1. The player rolls the Dice Price for that item. It's what the character thinks the item is worth.
2. The Referee rolls the Dice Price for that item, in secret. It's what the merchant thinks the item is worth.
3. The player must choose either their price or the merchant's price, which is unknown to the player.

Optionally, a player may make a CHA check to reroll their Dice Price, but the merchant's price is fixed. Optionally, if the character has a way to appraise their item, they may roll the Dice Price twice and pick the higher.

When pricing magic items, they sell for 50 gold per syllable, and, if magic items can be purchased, they cost 100 gold per syllable. The utility of the item is of little consequence; most of the haggling is about what to name it.

Schrödinger's Loot

Searching a chest, monster that would have loot, or other booty yields an amount of d6s in gold (depending on the speed at which the Referee rewards gold, HDd6 is a good

baseline). The character must stop to "count" (i.e., roll) the d6s to determine the exact amount of money they have looted.

HIRELINGS

Morale

What follows are a few examples of concrete values to adjudicate lowering a hireling's morale score if they are particularly well-treated and raising morale score as a result of poor treatment.

Bonus	If the hireling is
-1	housed.
-1	provided living expenses.
-1	given more than their share.
-1	provided extra comforts.
+1	insulted.
+1	faced with unnecessary danger.
+2	allowed to come to avoidable harm.

Simpler Hirelings

Hirelings come in only two types: hired hands and henchmen. Hired hands do menial work, like holding light, carrying treasure, and managing pack animals, but are not willing or able to meaningfully contribute to combat, nor are opposing combatants likely to pay much attention to them. Henchmen do pretty much whatever the players want, so long as they're not treated worse than a PC, and can act in combat at the same round as their employer.

Hired hands are ordinary, level 0 folk, not adventurers, with the stats 10-10-9-9-9-9 distributed as desired, d6 HP, 8 AV, and 4 morale. If forced to do anything dangerous, check their morale. Regardless of success, add one point to their morale score afterward. Instead of a percent share of loot, pay hired hands 1 gold per day plus living expenses.

Henchmen are mechanically generated just like PCs. They begin with 2 morale. Henchmen must succeed at a morale check when the situation becomes nigh-intolerable and at the end of each adventure, but they stop checking morale at all once they've passed two morale checks. Henchmen require 50% share, are rare, and are usually sought for hire from factions that the PC has gained favor from.

When either type of hireling fails a morale check, they leave the party permanently.

INITIATIVE

Action Tiers

For those Referees that feel the words "Roll initiative" conditions players to attack first and ask questions later, consider a tiered initiative system: Talk, Flee, Act, Fight.

When initiative begins, start with verbal interaction between PCs and NPCs. Then, if anyone wants to flee, they get away. Then, characters take action. Finally, the fight breaks out, and initiative proceeds as usual.

Declared Initiative

This ruleset is very slow to resolve, with each combat round taking several stages and with multiple actions per character, but it allows for flexible character choices and dynamic combat that can change in the middle of a round. A combat round consists of the following:

Enemy Planning: During this phase, the Referee examines the battlefield and declares the intentions of the creatures under his control. This description should be as short as possible. "The Skeletons are going to focus on taking out the Warlock," "The Dragon is going to ignore the party and attack the church," etc. The players read the battlefield and assess the current situation.

Player Planning: Now that the players have a broad idea of what the enemy is planning, they come up with a plan themselves, and declare their own intentions. At this stage, actions do not need any more detail than what is needed to determine the initiative roll. Working together is encouraged.

Roll Initiative: Each player and enemy simultaneously rolls initiative. The number and type of initiative dice an individual rolls depend on the activities the character plans to undertake during the next round. Consult the table below to determine initiative dice.

Die	Sample Actions
d4	Using an item, attacking with ranged.
d6	Generic action, moving.
d8	Attacking with melee.
d10	Casting a spell.

There is (within reason) no limit to what characters can attempt to do in a single round, as long as they roll the required initiative die for each action.

To begin the round proper, the Referee counts up from 1. Players and NPCs act on the count that corresponds to the sum of their initiative dice.

A player can choose to delay or change their action if the situation changes over the course of the round. To delay, instead of taking a turn on their initiative count, a player simply acts on a later initiative count. To deviate from their declared action, a player rolls new initiative dice in accordance to what they now want to do. This number is then added to their current initiative score, and becomes their new initiative score.

Lamps are Initiative

When exploring in total darkness, like caverns or dungeons, light is a necessity. Controlling light requires the complete use of one hand. If someone does not have a light, they must be with someone who does, within the radius of that light at all times. When a fight breaks out, only those with light roll initiative. When it is their turn, they determine initiative order of all characters with them. Characters in the darkness always act after every lit character.

Playing Cards 1: Deal Them to Players

Vanilla rules use group initiative; this is a variant that uses individual initiative.

Instead of rolling for initiative, each character gets one card from a deck, and a number of additional cards as determined by their DEX (e.g., one additional card for each point of DEX above 10). Monsters/NPCs are still grouped, but by type now. Initiative order is determined by each character's highest value card. In the case of ties, resolve alphabetically by suit: clubs beats diamonds beats hearts beats spades. Jokers can go at any initiative they choose.

Playing Cards 2: Assign Players a Card

Into a deck place:

- Two identical cards for each player character,
- An abundance of one card to signify hirelings,
- An abundance of one more card to signify enemies,
- One card that signifies the end of the round.

When combat begins, shuffle the deck. When a PC card is drawn, that PC may act. When a hireling card is drawn, the Referee takes an action for any one hireling present. They can take instructions from the players but are not obliged to follow them. When an enemy card is drawn, the Referee takes an action for any one enemy present. Hirelings and enemies can therefore act multiple times in a turn at Referee discretion, even above the number of initiative cards they contribute. Assume this represents the bolstering effect of having leader-sorts around. In practice, the Referee is encouraged not to use this for purely mechanical advantage, but in a way that makes sense and is enjoyable for everyone.

If the end of round card is drawn, then all cards are reshuffled and put back in the stack. Resolve any per round or end of round activities, such as magic effects, fire, poison, etc., remove any cards belonging to dead or absent participants, then draw another card and carry on.

On their turn, a character may decide to take aim with their weapon. To do so, they declare they are aiming and hold onto their initiative card. When their next initiative card is drawn, they attack, rolling with Advantage. If the end of round token comes up and they haven't used their aim action, they may decide to hold on to their card or abandon their action and put it back in the stack.

To delay an action, a character may choose not to act when they gain initiative, in which case they put their card back in the stack. This increases their chances of acting later, but does not guarantee it.

For cases in which a character is hastened, add a third (or fourth) card to the deck. If they are slowed, do the opposite. Alternatively, if a character is very fast, they may recycle their initiative cards for a turn, returning any initiative they draw back in the stack after using it. For slowness in this case, a player is forced to possess two whole initiative cards to act once, and must hold onto the first one drawn and pray another shows.

Popcorn/Narrative Initiative

The character which initiates combat goes first. If, for any reason, it is unclear who initiates combat, roll to determine who goes. After their action, the current character nominate the next character to act. Only characters that have yet to have their turn may be nominated. Once every character has had their turn, the round is over, and the process begins again, with the last character to act able to nominate any character, including themselves.

Characters can interrupt and take their turn instead of the nominee if they have taken damage in the previous turn and have yet to go in the entire round. If multiple characters receive damage and each want to interrupt, roll to determine who goes.

Surprise Rounds

A party that has surprise will gain a round to act before initiative is rolled and gain Advantage to all rolls in this round. Surprise occurs via Referee common sense; if a group is caught unaware, their foes have a surprise round. If there is a chance that either party is surprised, roll d6.

Roll	Result
1-2	The PCs surprise the enemy.
3-4	Neither party is surprised.
5-6	The enemy surprises the PCs.

Often, instead of attacking on a surprise round, foes should change the battlefield (throw nets, spring traps, set a fire, hide and snipe, send one of their party to bring reinforcements), or deprive the party of a resource (smash backpacks, extinguish torches).

“Swords & Spells” Initiative

These rules are particularly conducive to miniature/wargaming use. As such, they’re a bit slower to resolve. A combat round progresses in the following manner, with specific rules below:

1. Initiative: Both sides roll d6 for initiative; high roll wins.

2. Missile/spell: In initiative order, both sides fire missiles, begin to cast spells, etc. If a spell is instantaneous, it occurs now, otherwise, it occurs at step 10 after the number of rounds required to cast it.
3. Movement: Side with initiative moves up to half move.
4. Movement: Side without initiative moves up to half move.
5. Missile: In initiative order, both sides fire missiles, etc.
6. Movement: Side without initiative moves the remaining half move.
7. Movement: Side with initiative moves the remaining half move.
8. Missile: Unengaged combatants fire missiles, etc.
9. Melee: Engaged combatants fight in melee.
10. Spell: Spell effects occur.
11. Statuses: Ongoing conditions like burning, poison, etc., are resolved.

Attackers using ranged combat may fire twice if standing still, once if only taking a half move, and not at all if taking a full move.

A spell caster cannot move and cast a spell in the same round. A caster may not cast a spell while engaged in melee. If the caster becomes engaged while casting, but before the spell is finished, the spell is interrupted and lost. Casting time for spells depends on the spell.

MAGIC

Misfires and Wild Magic

When spells fail, are miscast, or are interrupted, or in certain wild magic zones, roll on the following lists.

Arcane

1. Different spell effect! The caster inadvertently channels the wrong spell energies. Randomly determine a different spell.
2. Fireworks! Brilliant colored lights explode all around the caster, creating thundering booms. This effect deals no damage but draws attention to the caster.
3. Cloud of ash! Everyone within 20 feet of the caster is coated in fine ash.
4. Mute! The caster cannot speak for the next minute.
5. Truesight! For one minute, see invisible creatures and illusions for what they are.
6. Hiccoughs! Until dispelled, roll with Disadvantage when attempting anything more involved than walking.
7. Hot feet! The shoes of a random ally catch fire.
8. Balding! All of the caster’s hair falls out.
9. De-bone! A nearby character loses their bones for d6 hours.
10. Gibbering equipment! An inanimate object on the caster’s person gains sentience and a voice.
11. Hairy! The caster grows d4 feet of hair in an instant.
12. Gums! The caster’s teeth fall out, regrowing in d6 hours. Until then, speaking and casting spells is done at Disadvantage.

Divine

1. Stained with the mark of the unfaithful! The symbol is automatically visible to all worshipers of the caster's faith, even through clothing, but may be invisible to others. Fades in d6 days.
2. Speak in tongues! The caster no longer speaks or understands any known language.
3. Grow some horns!
4. Unjust war! All weapons in the vicinity turn into flowers.

Natural

1. Nearest ally is partially transformed into an animal! WIS save to resist. Determine body part and animal randomly. The duration of this effect is d6 days; on a roll of 6, reroll as d6 weeks, then months.
2. Rain! But it's not water. The caster causes a torrential downpour of (d6): 1: flower petals. 2: garden snails. 3: cow dung. 4: rotten vegetables. 5: iron ingots. 6: snakes (5% chance they are poisonous).
3. Transformation! A random nearby creature is transformed into (d6): 1: stone. 2: crystal. 3: earth. 4: iron. 5: water. 6: fire. WIS save to resist. There is a 10% chance the transformation is permanent; otherwise, the creature returns to normal in d6 days.
4. Grow a tail!
5. Animal resurrection! All animals are brought back to life, including rations and leathers, which crawl and flap blindly.
6. Drought! All vegetation within the region withers and dies.
7. Lactose! All nearby liquid turns to curdled milk.
8. Heated steel! All nearby metal becomes incredibly hot. Anyone wearing, wielding, or touching metal takes d6 damage.

Necrotic

1. Explosion centered on nearest creature! That creature takes d4 damage per caster level.
2. Inadvertent corruption! Gain a Corruption point and roll on the minor corruption table, if using it.
3. De-age twenty-five years! If the caster is younger than 25, they disappear into cosmic pre-birth.
4. Age twenty-five years!
5. Melting money! All currency on the caster's person dissolves into the ether.
6. Summoning catastrophe! An untamed beast appears beside the caster.
7. Red eye! Whenever the caster opens their eyes, flame shoots out.
8. Alien hands! The caster's hands have a mind of their own and choke the caster, only reverting to normal when the caster passes out.
9. Vomit self! The caster coughs up a thick black fluid, which flees and becomes a doppelgänger.
10. Magic pustule! Plasmic fluid swells in the caster. If they take 5+ damage at once, they must make a CON save or explode, dealing d7 damage per caster level.

11. Haywire spell! The spell won't stop; it is cast out of control every round without cost until the caster is subdued.

Spell Effects

Spell casters enjoy the capability to produce minor magical effects related to the spells they have currently memorized. For example, a Magic-User who has a fire spell memorized might be able to light their pipe with a small flame from their thumb or make smoke come from their ears when annoyed. A caster with a wind spell might have their hair constantly blowing in an otherwise non-existent breeze.

Using a special effect does not cast or use up the spell it is related to; they're not so much "spells" as they are tangible evidence that the caster has a spell memorized. Referees need not codify these effects, but rather rely on the players to suggest or request an effect. Special effects are always minor, cantrip-like effects.

MANEUVERS AND COMBAT TRICKS

In the base game, maneuvers in combat are handled by saves and Referee judgment. What follows are some additional codified rules to work in general. The option or options the Referee chooses to use in their game should be made clear to the players, so that their options are well-known.

Combat Maneuvers 1

When a character attempts a maneuver in combat, like grappling or tackling or shoving or disarming, roll two attacks. If both succeed, the maneuver occurs (optionally: damage as well). If one succeeds, choose: partial success, success at a cost, (optionally: only one of damage or maneuver). If neither succeed, the character fails and finds themselves in a disadvantaged position.

Combat Maneuvers 2

When a character attempts a maneuver in combat, roll an attack as usual. If it is successful, the enemy chooses whether to accept the results of the maneuver or take damage as normal. Optionally, there can be a penalty to the attacker if the roll is unsuccessful.

Fire and Oil

Flaming oil can be used to cover a retreat or attack an enemy. An adventurer can prepare flasks of oil as firebombs, lighting the rags and hurling the flasks at the enemy, or hurl the flask and coat the enemy or area with oil, and then follow this up with a hurled torch or other source of ignition. Oil can also be poured on the ground and lit, either as a trap or as a deterrent to pursuit.

Oil burns for 10 minutes. Thrown oil is treated as a ranged weapon, but a missed throw will land within a few feet of the target. A direct hit with ignited oil does d6 damage

each round until extinguished. Characters near a direct hit of ignited oil will be splashed by the oil and take d4 damage until extinguished. Rolling a 1 downgrades the damage die for the next round. Rolling a max upgrades the damage die for the next round. If a 1 is rolled on a d4, the flames go out.

PERCEPTION

Group Perception

Every object has a concealment score ranging from 0 to infinity. Obvious objects have a score of 0. Most hidden objects are between 3 and 10. The party as a whole has a passive perception score equal to the number of player characters in it. This is their base capability to notice things as they move along in an orderly fashion. It represents them looking around for potential points of interest or danger, but not interacting with or examining things in detail. It requires no time or actions spent to observe the world around them at this level.

If the party stops moving and starts examining the area around them, they first roleplay the search, interacting with and examining objects. This involves specific indications of what they are examining, and how: "I check under the bed," "I cast detect magic and examine the room for auras," "I bang on the walls and listen for echoes," "I cut open the monster's stomach." If a character does something that should reveal a hidden object, then they find it.

Once the characters run out of ideas, they can roll a d6 and add it to the passive perception score. If the result equals or exceeds the concealment score of the objects, they discover the object once they come in sight of it. This kind of search requires a turn (roughly 10 minutes). After resolving the roll, they're done and can't find any more stuff until the situation changes somehow.

If the characters are broken up into groups, then each subgroup has a passive perception score equal to the number of characters in it. Hirelings, pets, etc. don't contribute to this score unless the specific skill that they were hired for is spotting things, like a tracker dog.

To determine concealment scores, consider the following metric:

- If the concealment is less than or equal to the number of characters, then the object is immediately obvious.
- If the concealment is between the number of characters +1 and the number of characters +3, then the object is likely to be found if they stop and search.
- If the concealment is between the number of characters +4 and the number of characters +6, then the object is very difficult to find even if they stop and search.
- In the absence of any other standard, roll d6+3 to determine the concealment score.

REACTIONS

Reaction Rolls

When encountering a new monster or NPC, a reaction may be rolled. Roll 2d6:

Roll	Result
2 or less	Loyal
3	Genial
4	Helpful
5	Somewhat genial
6	Neutral
7	Instinctual/Neutral
8	Guarded
9	Warning
10	Threatening
11	Aggressive/Hostile
12 or higher	Violent

These are general feelings, not a concrete response. A pack of hateful, hungry monsters that has a genial reaction may bare their teeth in warning rather than immediately go for the throat. A violent reaction from a gentle mother will result in fearful glances as she collects her children into her house, calls for help, and arms herself to watch the party from her window.

The reaction roll is modified by the party's reputation, by the immediate context (did the party just come from a house full of screams? Add 1 to their roll. Are they dressed in fine clothes? -1.), or by larger context (has the party spent huge amounts of money locally? -1.) The Referee should not award more than +1 or -1 for any single factor.

Reaction Rolls are Modified by Alignment

The dice rolled when encountering a new monster or NPC vary depending on the alignment/disposition of the encountered. Roll 3d4 for lawful creatures, 2d6 for neutral creatures, and d12 for chaotic creatures.

VARIANT CLASS ABILITIES

All of the following are alternative abilities for the vanilla classes. They can replace the vanilla options or be additional variants to choose from. By default, each class has two abilities, and in general, one scales with level while the other does not (though this is not a hard and fast rule). Some variant abilities may be more powerful than others; house rule at Referee's discretion. Inform players which options they have available to them so that they may make informed decisions.

A class ability listed below may be a good fit for more classes than the one given; feel free to house rule, mix, and match.

Cleric

BESEECH DEITY

Once per day, the Cleric can call for their deity's aid. Roll a d100; if the result is below the Cleric's level, the god answers. A Cleric can subtract 1 from their roll per 100 gold or per HD creature sacrificed.

HERETICS

Once per session, the Cleric can attempt to "turn undead" on non-undead enemies. Unlike turning actual undead, the Cleric stops after one attempt, successful or not.

SPELL SWAP

Once per day, a Cleric can pray with their symbol in order to swap a spell they know for one they do not of an equal or lower level for that day. Alternatively, they may pray to swap a spell for an additional channel energy. Alternatively, they may pray to upgrade a spell usage die: ->d4>d6>d8>d10>d12>d20. Time taken is based on the symbol's value. Wood means it takes 10 minutes. Iron means it takes a combat round. Silver means it's instantaneous.

Druid

BEAST FORM

The Druid can turn into one other creature at will. It can be another humanoid, or it can be an ordinary animal somewhere between the Druid's size and cat size. Its stats are exactly the same as the Druid's.

PLAGUE CARRIER

The Druid is fortified against all mundane diseases. Furthermore, if exposed to a magical affliction, like mummy rot or lycanthropy, the Druid rolls saves at Advantage, and if both dice are successful, the Druid's allies are saved as well. A Druid can attempt to inflict on their enemies any disease they have been exposed to.

Dwarf

INSPIRE

Once per fight a Dwarf can give any other PC an extra action, as long as it is not a melee or ranged attack or a spell.

SONG OF CHARM

The smooth-tongued Dwarf knows how to enchant and enthrall those who hear their crooning medleys. Once per day a Dwarf can sing a song to decrease the reaction roll of an NPC by 2. The Referee gets to make an immediate check for wandering monsters.

SONG OF COURAGE

The Dwarfs sing songs to inspire bravery and heroism in all who hear their valiant melodies. Once per day a Dwarf can sing a song to allow all allies, including the Dwarf, to

roll with Advantage on saves against fear and ally morale checks. The Referee gets to make an immediate check for wandering monsters.

SONG OF HISTORY

The Dwarfs have been recording their memories in song going back to before the making of the world. Once per day a Dwarf can sing a song to remember a clue related to any ancient mystery. The Referee must provide something useful, but they also get to make an immediate check for wandering monsters.

SONG OF TERROR

Dwarfs know the discordant melodies of ancient horrors, long since lost to history. Once per day a Dwarf can sing a song to force all allies, including the Dwarf, to roll with Advantage on attacks using fear and enemy morale checks. The Referee gets to make an immediate check for wandering monsters.

SONG OF THE FLEET OF FOOT

The magic of Dwarf song inspires companions to endure even when they are tired and homesick. Once per day a Dwarf can sing a song while traveling to gain 25% to the distance they can travel for the day. The Referee gets to make an immediate check for wandering monsters.

SONG OF THE HOPLON

The Dwarfs sing about their superior military technology. Their shields are second-to-none. Once per day a Dwarf can sing a song to increase all allies' AC by 1 (including the Dwarf's). The Referee gets to make an immediate check for wandering monsters.

SONG OF THE WARRIOR

The Dwarfs sing myths about the adventures of heroes and demigods, fearless in battle. Once per day a Dwarf can sing a song to increase all allies' AV by 1 (including the Dwarf's). The Referee gets to make an immediate check for wandering monsters.

SONG OF THE WEARY

Dwarf song is soothing; it calms distressed and tired allies. Once per day a Dwarf can sing a song during camp to allow all allies, including the Dwarf, to gain an additional 1 HP during rest. The Referee gets to make an immediate check for wandering monsters.

Elf

ANCIENT LORE

Elves tap into their ancestral memories during the strange, meditative trances they undertake during rest. When they meditate at night, elves may ask the Referee one question of something on the Elven akashic record. The response comes from an Elven ancestor and may be difficult to understand but is never false or misleading.

CRAFT SENSE

An Elf can appraise treasure well. They can estimate the value of non-magical things flawlessly, and if a piece of treasure, magical or not, is not what it seems, they can get an inkling if they ask.

HERBAL MAGIC

An Elf can use herbs to heal an ally d4 HP, fill a room with light, discern the truth from lies, or detect nearby monsters. This action immediately downgrades the herbs' usage die.

PERSISTENT

Every time the Elf misses an attack, they gain Advantage to hit, stacking until a successful hit.

TRUE SIGHT

An Elf can see the true form of a shape-changer, polymorphed subject, or anyone else whose original form has been changed. They spot all illusions for what they are. An Elf will be briefly aware of invisible creatures when they pass their field of vision, but they receive no other boon against them.

Fighter

BERSERK

Once per day a Fighter can berserk for one round per level. In the midst of berserking, the Fighter rolls damage and STR, DEX, and CON checks at Advantage, rolls AC and INT, WIS, and CHA at Disadvantage, and cannot die or accrue death/near-death effects until after berserking.

DISTRIBUTING DAMAGE

Replacing the ability to attack a new target on a killing blow, a Fighter can choose on a successful hit to distribute the damage rolled between a number, up to the Fighter's level, of targets within reach, so long as they each have an equal or lesser AC to the one just hit.

DUAL WIELDING

If the Fighter keeps both hands otherwise free (no shields, torches, potions, etc), then they may hold a weapon in each hand. If a dual wielding Fighter succeeds at hitting an opponent, then they may roll a damage die for each of their weapons and choose the higher value.

MIGHTY DEEDS

In lieu of an attack, Fighters can attempt any maneuver in combat. To succeed, they must roll a 4 or higher on their Mighty Deed die. The Mighty Deed die increases as the Fighter levels up: d4>d6>d8>d10>d12>d20.

PARRY

The Fighter can use an action to defend themselves against enemy attacks. Gain Advantage on AC rolls and saves, and

gain immunity to any surprise effects until the Fighter's next turn.

WEAPON MASTERY

Fighters can gain additional bonuses based on the type of weapon they use. These can be treated as passive abilities or as combat maneuvers, using any maneuver rules.

Weapon Type	Bonus
Chop (axes)	Reroll damage results of 1 or 2.
Grapple (whips)	Pull your enemy's legs out from under them.
Slice (swords)	If the Fighter parries and the foe would have missed anyway, get a free counterattack.
Smash (hammers)	Daze on hit, stunning the target until the end of the round.
Stab (daggers)	Deal max damage when grappling.

Halfling

CARD CHEAT

Halflings are experts at parlor games, cards, board games, dice games, etc. Whenever such things come up, the Referee must give a Halfling some clear advantage when determining the winner.

FIGHTING WITHOUT FIGHTING

On the first round of combat, if the enemy strikes first (or if the Halfling lets the enemy strike first) with a physical attack, the Halfling can announce they are "fighting without fighting." They get no attack this round, but instead do a clever dodge or redirect; the enemy does however much damage they would've done to the Halfling to themselves instead (regardless of the enemy's AC).

FILCH

On a successful melee hit, the Halfling may immediately **Thread the Needle** above enemy HD and below DEX to grab an item (other than the target's weapon) off the target. This won't work twice on anyone above zombie-intelligence who sees it.

JAM THE TRAP

If a character triggers a trap and the Halfling is in a place to do so, they may jam the trap by **Threading the Needle** below DEX and above the HD of the trap. Success means the trap effect is delayed for one round. The Halfling may continue to jam the trap for as many rounds as they continue to succeed their roll, but upon their first failure, the trap is immediately triggered, and the Halfling is always in the crossfire, along with any other targets. The Halfling can take no other actions while they are jamming the trap. If a trap is disabled while the Halfling is jamming the trap, they may stop jamming the trap without consequence.

LUCKY BREAK

A Halfling may escape death or another equally awful fate exactly once. They must spend at least a round playing opossum to build tension.

SCOUNDREL FIGHTING

If the Halfling successfully attacks a foe with a dagger or similar weapon, they have the option to leave the dagger in some horrible place. The dagger will do d6 ongoing damage per round and will do d20 if they take it out. Magical healing will allow safe extraction of the dagger, as will decent mundane medical attention.

SECOND BREAKFAST

Once per session, a Halfling may gluttonously devour a week's worth of rations at once and heal d6 HP.

SEEDY CONTACTS

In addition to or replacing the Halfling's favors, a Halfling gains one contact at each level up. This ability can be triggered in any civilized area (or uncivilized areas that travelers frequent) by shouting "HEY, IT'S YOU!" These will generally be low-level low-class types: thugs, mountebanks, and freakshow performers, and, though they have information, they will not be adventurer/hireling material (i.e., they won't help fight things or open trapped doors). However, in lieu of gaining a contact at level up, a Halfling can elect to do one of the following: upgrade an existing contact to upper-class status or upgrade an existing contact to adventurer status.

Magic-User

COUNTERSPELL

Magic-Users may roll their spell usage die to protect as many people as their level from the effects of a spell. This must be done before damage or saving throw are rolled. For example, a level 2 Magic-User can roll their d6 spell usage die to protect two people from a spell.

FAMILIAR

A Magic-User can have a small animal as their familiar. It holds and can cast a single extra spell daily. The familiar can be given simple instructions, can communicate mentally with the caster, and cannot be killed, instead disappearing in a puff of smoke to reappear one hour later. If the Magic-User dies, their familiar erupts as a magic bomb, dealing d6 damage per Magic-User level to those nearby.

POORLY LEARNED SPELLS

Once per day, the Magic-User may cast any spell. It has a 50% chance of backfiring.

SPELL SWAP

In lieu of the Magic-User's ritual ability, once per day, a Magic-User can swap a spell they know for one they do

not. Doing so requires a minute of intense study.

Paladin

DILIGENCE

The Paladin may keep acting even once their HP total has reached 0 or less. They only stop when the task they are attempting (e.g., holding a position or combating an evil foe) is completed, or when their accumulated negative HP is greater than CON + level, whichever comes first.

FANATIC FOLLOWERS

A Paladin's hirelings that do not already have a strong faith gain -2 morale from the Paladin's contagious religious fervor. (Recall: lower morale scores are better.)

LIMBS SHALL BE SPLINTERED

If a Paladin fails a STR or DEX save and would be dealt damage, they can opt to lose a limb instead, and ignore the damage.

MERCY

When striking a living creature with a blow that would be fatal, a Paladin may opt for the hit to instead send them into unconsciousness. Assuming they do not perish through some other means afterward, they will be aware that the Paladin spared them and may think of them more favorably from then on.

SMITE

Any time a Paladin rolls maximum damage with a melee weapon, immediately **Thread the Needle** below CHA and above enemy HD. Success stuns the enemy for d4 rounds.

UNFINISHED BUSINESS

If the Paladin perishes fighting for a great cause that remains undone and if even one person calls for them to return, they may stand again once more, regaining half of their total HP. This power also allows the Paladin a moment of invulnerability, so that if they fell prey to a trap they may pull themselves free of it. This power works only once.

Ranger

ASSURED SHOT

The Ranger always has ranged ammunition when needed.

RECKLESS CHARGE

On the first round of any combat (and only on the first round) the Ranger may gamble any number of their HP on an attack against their quarry. If they hit, do that much damage; if they miss, take that much damage, indicating the quarry was able to set up to receive the charge.

SURVIVOR

If a Ranger gets hopelessly lost in a dungeon or the wilderness, they can make their way to safety no more than d6 days later, emerging naked and covered in slime, filth, and blood, exhausted, but alive. The Ranger can only save d6 other individuals, including party members, NPCs, and hirelings. If the roll is not high enough to account for the whole party, the player must choose who lives and who dies and is not allowed to settle this question by die roll, drawing straws, or any other form of cop-out.

WILD SENSE

In the Ranger's favored terrain, they can anticipate wandering monsters a round ahead of time in that environment and are immune to non-magic surprise there.

Warlock

GUT MAGIC

If the Warlock eats something, they can choose to cause someone else that they have seen to vomit it up.

MOON MAGIC

A Warlock learns an extra spell in the week preceding the new moon and forgets a spell during the week preceding the full moon. At the time of the new moon they gain an extra spell per Warlock level and vice versa at the time of the full moon.

TREACHERY

The Warlock may save themselves from death, level drain, failed Corruption checks, or any other imminent doom by choosing another PC to take the fall. This can be used in any situation where perfidy and treachery can be brought to bear. This can only be done once, but once is enough.

WILDERNESS, OVERLAND, AND SURVIVAL

Eating Monsters

A dead monster has a 1 in 6 chance of being unusable. Otherwise, dead monsters provide one ration per HD.

Monster meat can be prepared. Odds of doing so successfully are 1 in 6, with an increase by 1 for each of the following: fire, water, utensils, pots and pans, spices. A well-stocked party that can take time to prepare succeeds automatically.

Upon consumption, roll d6 to check for additional benefits. Add 1 if the food was prepared, and subtract 4 if the food was rotten. Compare the result with the following:

Roll	Result
0 or less	Save vs CON or lose d6 HP
1	Save vs CON or no effect
2-5	No additional effect
6 or higher	Heal 1 HP

Encounters 1

Wilderness encounters are checked once when the party sleeps, once every hex, and whenever the party is loud. Typical encounter odds are on the following table (roll d6), but it is often the case that Referees may want to use different probabilities for specific locations.

Terrain	Result of Encounter Die			
	Nothing	Non-combat	Monster Omen	Monster
Deserts	1-2	3	4	5-6
Forests	1-2	3	4	5-6
Jungles	1	2	3	4-6
Hills	1-2	3	4	5-6
Mountains	1	2	3	4-6
Plains	1-3	4	5	6
Roads	1-3	4	5	6
Swamps	1	2	3	4-6

Encounters 2

For both overland and dungeon exploration, the following is an alternative way to check for encounters. Roll d6 every set time interval (e.g., 10 minutes, hour, etc.), which will be referred to as a turn.

Roll	Result
1	Encounter.
2	Percept (clue, spoor).
3	Locality (context-dependent timer).
4	Exhaustion (rest or take penalties).
5	Lantern.
6	Torch.

Ignore results that do not make sense, such as torches going out on the first turn or PCs needing to rest on the second turn. A result should be interpreted not as "X happens," but rather as a prompt. A result can be deferred, but only so many times. As a guideline, ignore results above 3 for the first 6 or so turns.

Torches should probably go out almost every time a 6 six comes up and lanterns should deplete approximately every third or fourth result of 5. "Locality" refers to area-specific states that should be kept separate from standard random encounters, like water rising, the stalker drawing nearer, a prisoner losing an appendage to the torturer, doors locking behind PCs, and so forth.

Encounters 3

For lighter Referee bookkeeping, random encounters are rolled when the players stay still inside the dungeon for an extended period of time. No wandering monsters checks while they're moving around and keeping the pace up, never staying in the one place for more than a few minutes. Time should still be tracked, but only for light sources and rations.

When the characters stop for about 10 minutes, roll a d6 for a random encounter. Consult the table below.

Roll	Is there an encounter?
1	Yes.
2	If the party is making a little noise, like searching a room or casting spells.
3	If they're making a lot of noise, like breaking a door down, ransacking a room, or climbing a wall with pitons.
4	Only if they're making a deafening noise, like detonating an explosive.
5	Only if they're making a deafening noise, like detonating an explosive.
6	Only if they're making a deafening noise, like detonating an explosive.

Hex Travel

The following rules describe how the party navigates the overworld, specifically when attempting to move from their current hex to the next. This ruleset assumes a standard 6 mile hex.

Keeping a landmark in view ensures accurate navigation, as does traveling via road. View is usually three miles in open terrain, but can be reduced (e.g., overgrown terrain in a forest) or increased (e.g., looking out from a mountain peak). If navigation is not ensured accurate, the chance to get lost is:

Terrain	Chance
Plains	1 in 6
Mountains, Hills, Forests	2 in 6
Deserts, Jungles, Swamps	3 in 6

A player with relevant knowledge or a map can each decrease the odds of getting lost by 1. The following also increase the odds of getting lost by 1 each: traveling off roads at night (sans full moon), traveling hastily, the inability to see the sky, bad weather.

When lost, the party moves randomly to a different hex adjacent to the current one. Consider the edge the party intends to pass through. Roll a d6 to determine the deviation from the intended path.

Roll	Result
1	Two hexes left
2-3	One hex left
4-5	One hex right
6	Two hexes right

A party will not necessarily know when they have become lost, but can discover that they are lost by choosing a character to **Thread the Needle** below WIS and above 9 (at their discretion, never at the Referee's prompting). It takes time to check if one is lost, consulting maps and getting one's bearings, so that it is not overused. (If an abstract gamified rule is needed, take e.g. that the party can only check if they are lost when they change hexes.) At Referee's discretion, the lower bound of the roll that **Threads the Needle** to check if the party is lost may be lowered as the party wanders farther from their intended destination and it becomes more obvious they are on the wrong track. Alternatively, the party should instantly know that they are lost if they reenter a well-known hex or gain new information that demonstrates they are lost.

The party can travel up to 12 hours in a day without becoming Fatigued (for a sample mechanic of becoming Fatigued, see **Conditions Take Inventory Slots**). They may push themselves to travel up to 16 hours, but gain Fatigue and can only travel 6 hours the next day. The party travels at the following given speeds, which may be modified faster if traveling via horse or similar and slower if encumbered or injured or otherwise unable to move efficiently.

Terrain	Hours to traverse one hex
Deserts	6
Forests	6
Hills	4
Jungles	6
Mountains	12
Plains	3
Roads	1
Swamps	6

Hunting, Gathering, and Foraging

Foraging takes no extra time but may only be done once every 6 miles. Choose one party member and have them **Thread the Needle** below WIS and above 9 to successfully forage for d3 rations.

The party may also forage for herbs. It takes no extra time to randomly discover one. To search for a specific herb

requires 3 hours and is found only half the time, if it is even present in the hex.

Hunting requires 3 hours. Choose one party member and have them **Thread the Needle** below WIS and above 9 to successfully hunt d6 rations. For each downgrade of an arrows' usage die, decrease the lower bound of the roll by 1. For instance, if the party decreases an arrows' usage die from d10 to d6 (two downgrades), then a successful hunt is a roll below WIS and above 7.

Optionally, foraging and hunting in forests and jungles is rolled at Advantage, and foraging and hunting in deserts is rolled at Disadvantage.

Tracking

It takes d4 exploding (i.e., upon rolling 4, roll another d4 and add to the result, repeating as necessary) half hours to find the source of tracks.

Weather 1

Roll d6 each morning/afternoon/evening.

Roll	Result
1	Bad.
2	A little worse than it was. Signs of bad weather.
3	A little better than it was.
4-6	Typical for the season and locale.

Feel free to use the following descriptors:

- Cold: cool, chilly, breezy, frigid.
- Warm: hot, sunny, humid, sweltering.
- Wet: hail, rain, thunderhead, storm, drizzle, hazy, snowflakes.
- Other: cloudy, windy, mild, clear, overcast, foggy, dry.

Weather 2

Roll 2d6 where the two dice are visually distinct. Denote one die as the first and the other as the second.

If the first die shows a 1, it's cold. If the first die shows a 6, it's hot.

If the second die shows a 1, it's rainy. If the second die shows a 6, it's cloudy.

Weather combines in the following ways:

- Cold + rainy = snowy.
- Cold + cloudy = foggy.
- Hot + rainy = stormy.
- Hot + cloudy = gale-force winds.

Weather imposes the following conditions or status effects:

Weather	Effect
Cold	A campfire and blanket are required for comfortable sleep.
Hot	More water than usual is necessary.
Rainy	Flying creatures are obscured. A tent is required for comfortable sleep. Parties attempting to surprise have Advantage.
Cloudy	Flying creatures are obscured.
Snowy	In addition to cold and rainy, travel speed is halved.
Foggy	In addition to cold and cloudy, viewing distance is halved.
Stormy	In addition to hot and rainy, darkness is generated and the likelihood of wandering monsters is doubled.
Gale-force winds	In addition to hot and cloudy, ranged attacks have Disadvantage.

In certain terrains, such as the desert, jungle, mountains, etc., you can eliminate certain weather types, make others more likely, or invent new ones like magical storms/acid rain/sandstorm etc.

To incorporate seasons, do the following:

Season	Modification
Spring	-2 to the second die.
Summer	+2 to the first die.
Fall	+2 to the second die.
Winter	-2 to the first die.
